BSIT 301I

Install the vscode Text editor to be used in creating code snippets.

Create a personal folder inside the htdocs directory of the localhost server. You should also be able to extract the downloaded Bootstrap and paste it into the project folder.

3 items

Build a simple web page involving the Bootstrap grid system where they will be able to create various layout of columns (2-equal columns, 3 equal columns, 4-8 columns, etc) using the .rows and .cols classes inside a fluid or container layout.

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5
6   <meta name="viewport" content="width=device-width, initial-scale=1.0">
7   <title>Bootstrap Grid Layouts</title>
8   <!-- Bootstrap CSS -->
9   <link rel="stylesheet" href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.0/dist/css/bootstrap.min.css">
10  <style>
11    .row {
12      margin-bottom: 0;
13    }
14
15    .row div {
16      border: 1px solid white;
17      padding: 15px;
18      text-align: center;
19      font-weight: bold;
20      color: white;
21    }
22
23    .col-3 {
24      background-color: #897ecf;
25    }
26
27    .col-4 {
28      background-color: #de9cc1;
29    }
30
31    .col-6 {
32      background-color: #e5a585;
33      color: #333;
34    }
35
36    .col-8 {
37      background-color: #e38b8b;
38    }
39  </style>
```

Conclusion

I recalled about the Bootstrap grid system, it is a layout tool that helps us create responsive web designs by using the `.row` and `.col` classes. We can create equal and unequal column layouts, build responsive designs that adapt to different screen sizes, use nested columns for complex layouts, control column widths precisely with `col-1` through `col-12` classes, and combine auto-width columns with fixed-width columns.
